Safety Instructions

WARNING: Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Read the installation, operating and maintenance instructions thoroughly before installing or servicing this equipment.

Placement and Location

The Cal Flame Power Burner is designed for outdoor use only.

- Never locate this appliance in an enclosed room, under a sealed overhead structure, or in any type of enclosed area such as a garage, shed, or breezeway. Keep clear of trees and shrubs.
- Do not place the Power Burner under or near windows or vents that can be opened into your home.
- The Power Burner is not intended for installation in or on recreational vehicles or boats.
- Maintain sufficient distance as to not overheat any overhead combustible material such as a patio cover.
- The area surrounding your new Power Burner should be kept clean and free from flammable liquids and other combustible materials such as mops, rags or brooms, as well as solvents, cleaning fluids, and gasoline.
- Do not store the liquid propane (LP) cylinder in the vicinity of this or any other appliance when it is not being used.

Set-Up

- Before installing a built-in Power Burner in an enclosure, copy all product information such as model number, serial number and gas type (LP) to page 34 of this manual. This information is located on a plate located on the right side of the chassis.
- We recommend that a licensed contractor install your Cal Flame Power Burner. Installation must conform to local codes, or in the absence of local codes, with either the *National Fuel Gas Code*, ANSI Z223.1 / NFPA54, *Natural Gas and Propane Installation Code*, CSA B149.1, or *Propane Storage and Handling Code*, B149.2), as applicable.
- To prevent fire and smoke damage, remove all packaging material before operating your Power Burner.
- Before you start cooking, clean the Power Burner thoroughly with hot, soapy water. This is necessary to remove residual solvents, oil and grease used in the manufacturing process.

Operation

- Do not use the Power Burner for other than its intended use.
- Never use the Power Burner if the drip pan is not in place. The drip pan should be pushed all the way in under the Power Burner. Fire or explosion can result from an improperly installed drip pan.
- Keep all electrical supply cords away from the heated areas of the Power Burner.
- Never use the Power Burner in windy conditions. If used in a consistently windy area a windbreak will be required. Always adhere to the specified clearances listed in this manual.
- When the unit is not in use, be sure to turn off the gas at the source.
- Do not install or operate your Power Burner in such a manner that the cross ventilation openings are blocked. Fresh air must be able to pass through installed vents to safeguard against residual gas accumulation. Failure to allow proper ventilation may cause fire or explosion.
- Do not use fuel such as charcoal briquettes in the Power Burner.
- Gas sources to the Power Burner must be regulated. Do not operate the Power Burner if the regulator has been removed. Fire or explosion can occur.
- Never leave the Power Burner unattended when in use.
- Do not use water on grease fires. Turn the appliance off and smother the flaming pan with a tight-fitting lid, a cookie sheet or a flat tray. For flaming grease outside of the pan, smother it with baking soda or use a dry chemical or foam-type fire extinguisher.
- Never allow clothing, pot holders or other flammable materials come in contact with or be close to any grate, burner or hot surface until it has fully cooled. Never wear loose fitting or hanging

DANGER

What To Do If You Smell Gas

- Shut off gas to the appliance.
- Extinguish any open flame.
- Keep lid up.
- If odor continues, keep away from the appliance and immediately call your gas supplier or your fire department.

garments while using your Power Burner. Fabric may ignite and result in personal injury.

- When using the Power Burner, do not touch the grate or immediate surroundings as these areas become extremely hot and can cause burns.
- Only use dry pot holders and do not use a towel or other bulky cloth in place of pot holders. Moist or damp pot holders used on hot surfaces can cause burns.
- Do not heat any unopened glass or metal container of food on the Power Burner. Pressure may build up and cause the container to burst, possibly resulting in serious personal injury or damage to the Power Burner.
- Do not reach over your Power Burner or any other surfaces when hot or in use.

Maintenance and Repair

- Spiders and other insects can nest in the burners and block the gas and airflow to the burner ports. This creates a dangerous condition that can result in a fire behind the valve panel. Inspect and clean the burners periodically and follow the guidelines in the Cleaning and Maintenance section of this manual.
- Unless specifically recommended in this manual, do not repair or replace any part of the Power Burner. A qualified technician should perform all service. Any repairs made by a non-LMS approved dealer technician will void your warranty.

Storage

- When your Power Burner is not in use, ensure the in-line gas valve or gas cylinder valve is always shut OFF.
- Storing the Power Burner indoors is permissible only if the supply cylinder is disconnected and removed.

Precautions Regarding Children

- Never leave children unattended in the area where the Power Burner is being used. Close supervision of children is necessary when any appliance is use near children.
- Do not store items of interest to children around or below the Power Burner.
- Never allow children to sit or stand on any part of the Power Burner.

Installation / Assembly

Most cities and counties require permits for exterior construction. In addition, some communities have codes requiring residential barriers such as fencing and/or self-closing gates on property to prevent unsupervised access to the property by children under the age of five. Your dealer can provide information on which permits may be required and how to obtain them prior to the delivery of your equipment.

We recommend the installation, adjustment and service of your new Power Burner be performed by LMS qualified installers and service technicians to ensure proper operation and prevent accidents.

When planning the location of your Power Burner, access to a gas line should be considered. The location with the shortest gas line run is recommended.

When determining a suitable location, consider factors such as exposure to wind, proximity to traffic paths, and windows that open into the home.

Locate the Power Burner only in a well-ventilated area.

If you do not have an updated filler valve on your existing propane tank, you will need to purchase one at your local hardware store. Without it you will not be able to attach your tank to your Power Burner or refill the tank at your local propane refill station.

Converting the Power Burner

IMPORTANT: The Cal Flame Power Burner is manufactured to operate on liquid propane (LP). However, they can be converted to operate on natural gas (NG) by an authorized service technician. Consult your Cal Flame dealer for information on converting your gas Power Burner. See page 26 for conversion instructions.

Owners must not convert their Power Burner themselves. Attempting to convert the Power Burner from LP to NG may result in serious injury and will void the warranty coverage.

Cabinet Cut-out Dimensions

Your Cal Flame Power Burner is designed for easy installation into a non-combustible enclosure. The supporting deck or counter must be flat and level.

Width	Depth	Height
18"	20"	9 ¼"

WARNING:

This product can expose you to chemicals including Chromium (hexavalent compounds), which are known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to: www.p65Warnings.ca.gov

LP Gas

Tank Requirements

For plumbed-in LP installation, use a convertible regulator and set it for LP gas.

Maximum line pressure for plumbed-in propane is 14" WC (3.5 kPa). Minimum line pressure for propane is 11" WC.

The Power Burner must be used with the gas pressure regulator. The regulator will control and maintain a uniform gas pressure in the manifold. The burner orifices have been sized for the gas pressure delivered by the regulator.

WARNING: Attempting to operate the Power Burner without the gas regulator installed could cause an explosion and possible death.

Cylinder Specification

Any LP gas supply cylinder used with the Power Burner must be:

- Constructed and marked in accordance with the *Specifications for LP-Gas Cylinders* of the U.S. Department of Transportation or the National Standard of Canada, *CAN/CSA-B339, Cylinders, Spheres and Tubes for Transportation of Dangerous Goods; and Commission*, as applicable.
- Approximately 12 inches in diameter and 18 inches high.

The maximum fuel capacity is 20 lbs. of propane, or 5 gallons. Full cylinder weight should be approximately 38 lbs. (43.7 lbs. nominal water capacity.) Never fill the cylinder beyond 80% full.

Place the dust cap on the cylinder valve outlet whenever the cylinder is not in use. Only install the type of dust cap on the cylinder valve outlet that is provided with the cylinder valve. Other types of caps or plugs may result in leakage of propane.

LP Gas Hook Up

An enclosure for an LP gas cylinder shall be vented by openings at the level of the cylinder valve and at floor level. The effectiveness of the openings for purposes of ventilation shall be determined with the LP-gas supply cylinder in place. This shall be accomplished in one of the following manners:

1. One side of the enclosure shall be completely open.
2. Enclosures that have four sides, complete with a top and bottom:
 - a. At least two ventilation openings at cylinder valve level shall be provided in the sidewall, equally sized, spaced at 180° (3.14 rad), and unobstructed. Each opening shall have a total free area of not less than one square inch per pound (7.1 cm²/kg) of stored fuel capacity, and not less than a total free area of 10 square inches (64.5 cm²).
 - b. Ventilation openings shall be provided at floor level and shall have a total free area of not less than one square inch per pound (7.1 cm²/kg) of stored fuel capacity and not less than a total free area of 10 square inches (64.5 cm²). If ventilation openings at floor level are in a sidewall, there shall be at least two openings. The bottom of the openings shall be at floor level and the upper edge no more than 5 inches (127 mm) above the floor. The openings shall be equally sized, spaced at 180° (3.14 rad) and unobstructed.
 - c. Every opening shall have minimum dimensions so as to permit the entrance of a 1/8 inch (3.2 mm) diameter rod.

Transporting and Storing LP Gas

Transport only one cylinder at a time. Ensure the cylinder is secured in an upright position with the control valve turned off and the dust cap in place. Store cylinders outdoors and out of reach of children. Do not store cylinders in a building, garage, or any other enclosed area.

Natural Gas

Requirements

Always check the rating plate to make sure the gas supply you are hooking up to is the gas type the Power Burner is manufactured for.

IMPORTANT: Never connect the Power Burner to an unregulated gas supply.

The installation of this appliance must conform with local codes or, in the absence of local codes, to the national fuel gas code, ANSI Z223.1a-1998. Installation in Canada must be in accordance with the standard CAN/CGA-B149.2, Propane Installation Code.

A licensed contractor or local gas company representative must perform all natural gas connections.

Ensure that the service supplying the Power Burner is fitted with a shut off valve conveniently positioned near the appliance and giving ease of access.

The Power Burner must be isolated from the gas supply piping system by closing its individual manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 0.5 psi (3.5 kPa).

The Power Burner and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressure in excess of 0.5 psi (3.5 kPa).

The Power Burner for use with natural gas comes equipped with its own regulator that **MUST NOT** be removed. If this regulator needs to be replaced, use only the type specified by Cal Flame for this appliance.

Connection

1. Slide the Power Burner forward to gain access to the regulator and gas connection point in the rear.
2. Connect a suitable flex connector to the NG regulator.
3. Check the controls to ensure all control valves are in the full OFF position.
4. Turn on the main gas supply and check all connections for leaks using soapy water as described in the leak testing procedure section.

Leak Testing Procedure

Perform a leak test at least once a year whether the gas supply cylinder has been disconnected or not. In addition, whenever the gas cylinder is connected to the regulator or whenever any part of the gas system is disconnected or replaced, perform a leak test.

As a safety precaution, remember to always leak test your Power Burner outdoors in a well-ventilated area. Never smoke or permit sources of ignition in the area while doing a leak test. Do not use a flame, such as a lighted match to test for leaks. Use a solution of soapy water.

1. Prepare a leak testing solution of soapy water by mixing in a spray bottle one part liquid soap to one part water.
2. Make sure all the control knobs are in the OFF position.
3. Turn on the gas.
4. Apply the leak-testing solution by spraying it on joints of the gas delivery system. Blowing bubbles in the soap solution indicates that a leak is present.
5. Stop a leak by tightening the loose joint or by replacing the faulty part with a replacement part recommended by the manufacturer. Do not attempt to repair the cylinder valve if it is damaged. The cylinder must be replaced.
6. Turn all control knobs back to the full OFF position.

If you are unable to stop a leak:

1. Turn all control knobs back to the full OFF position.
2. Shut off the gas supply to the Power Burner and release pressure in the hose and manifold by pushing in and turning any of the control valves one quarter turn counter-clockwise.
3. On LP systems, remove the cylinder from the Power Burner.
4. Call an authorized gas appliance service technician or an LP gas dealer.

Do not use the appliance until the leak is corrected.

Placing the Power Burner in a Built-in Enclosure

You may need a second person to help you to avoid damaging the Power Burner or your enclosure.

Before installing the Power Burner in an enclosure, make sure that the opening is not bigger than the outside frame of the Power Burner. The Power Burner should rest on the lip of the frame.

Pay careful attention to the location of the gas line. It should be routed away from sources of heat and should make as few bends as possible.

Check to see if the gas line connection will be accessible when the Power Burner is installed.

- If the gas line connection is not easily accessible when the Power Burner is installed, support the Power Burner above counter level and attach the gas line to it. When the gas connection is made, slide the Power Burner into the cut out.
- If the gas line connection is accessible when the Power Burner is installed, slide the Power Burner into the cut out and then attach the gas line.

Be very careful not to kink the gas line when lowering the Power Burner into the cut out.

Keep your fingers away from where the Power Burner will be supported on counter. Your fingers could become trapped and serious injury could occur.

Check to make sure the Power Burner is level and is supported around the entire outside edge. If the Power Burner is not level or is unstable, use non-combustible shims under the outside lip to stabilize it.

Perform the leak test procedure as described on page 9.

Using Your Power Burner

Read all instructions before you operate your Power Burner.

We recommend you wash the Power Burner thoroughly with soap and water prior to lighting it for the first time. Oils are used during the manufacturing process and some residual oil may still be on the stainless steel parts of your Power Burner. Washing will reduce the possibility of discoloration. We also recommend you keep your Power Burner covered when not in use. This will minimize the amount of dust and dirt that accumulates on your Power Burner and extend its life.

Remember to use your Power Burner safely by following these reminders:

- It is dangerous to use Power Burner in any manner other than for what it is designed for.
- Do not use charcoal in the Power Burner.
- Do not heat sealed containers such as cans or jars on the Power Burner. Explosion may result resulting in injury or death.
- Never put combustible material such as paper, cloth, or flammable liquids on your Power Burner at any time. Do not use the Power Burner or any area around it to store flammable materials.
- Never spray water on a hot gas unit. This may damage components.

The stainless steel ring placed around the brass burners functions both as a wok ring and as a baffle for the burners. (See page 15.) Do NOT remove it except for cleaning. It must always be in place during operation.

Power Burner Controls

The controls shown below are for the Power Burner. Familiarize yourself with these controls before using your Cal Flame Power Burner.

Basic Operation

Before lighting, make sure all burner controls are off. Do not attempt to light the burners if the smell of gas is present. Check the connection with a soap and water solution after attaching the hose. For LP units, make sure there is gas in the tank and it is sitting upright. For natural gas units, make sure the shut off valve is on.

Make sure the drip tray is in place.

Light the burners using the instructions on the next page.

Place the pot on the grate and cook to desired completion. Adjust heat setting if necessary. You may set the control knob to any position between HIGH and LOW.

Do not leave the Power Burner unattended while cooking.

Do not place food directly on the grate. The Power Burner is not a grill and should not be used in this way. Always use cooking utensils with the Power Burner.

When using propane gas:

- Keep the special ventilation openings in the enclosure free and clear of debris.
- If connected to a propane cylinder, carefully inspect the rubber hose attached to the regulator before each use.
- Ensure the propane cylinder, regulator, and rubber hose are installed in a location not subject to heating above 125° F (51° C).

Each time you light the Power Burner, check the following:

- Inspect the hose before using the Power Burner. If there is excessive abrasion or wear, or if the hose is cut, it must be replaced prior to using the Power Burner. If you need a replacement hose, contact your dealer.
- Ensure the area around the Power Burner is clear of flammable substances such as gasoline, yard debris, wood, etc.
- Ensure the burner flames burn evenly with a steady flame (mostly blue with yellow tipping). If burner flames are not normal, check the orifice and burner for insects or insect nests. See troubleshooting procedures on page 23.

Lighting the Power Burner

Electronic Ignition

1. Lift the cover.
2. Keep your face as far away from the burners as possible.
3. Turn the burner knob counter clockwise past the light position to HIGH. You will hear a loud click as the electronic lighter produces a spark.
4. Listen for the sound of the gas igniting. If the burner does not light on the first try, repeat immediately.
5. If the burner does not light after three attempts, turn the control knobs to the OFF position. Wait five minutes until the gas clears before attempting to light it again.
6. Repeat the procedure or try the manual lighting procedure below.
7. Upon successful lighting, repeat the process on the other burner.
8. To shut off the burners, rotate the knob and turn to OFF. It is normal to hear a popping sound when the burners are turned off.

Manual Lighting

WARNING: Do not use standard matches or cigarette lighters. Serious burns can occur and lighters can explode.

1. Lift the cover.
2. If you have just attempted to light the burner, allow five minutes for any accumulated gas to dissipate.
3. Keep your face as far away from the burners as possible.
4. Light a long stem match or butane lighter, holding it near the burners.
5. Push in and turn the control knob just past the LIGHT position to HIGH.
6. Listen for the sound of the gas igniting. If the burner does not light after five seconds, turn the control knobs to the OFF position. Wait five minutes until the gas clears before attempting to light it again.
7. If the burner does not light after several attempts, see troubleshooting procedures on page 23.

Power Burner Lid

We strongly recommend you remove the lid for your Power Burner before each use.

The Power Burner lid is attached to the unit by two hinges on each side. Each hinge has a detachable spring-loaded hinge pin that removes easily when pulled out.

NEVER put the lid down while using the Power Burner!

Doing so can cause excessive heat to accumulate under the lid, resulting in fire, explosion, damage to property, personal injury, or death.

Using the Wok Ring

If you have a wok, you can use it with the Power Burner. Remove the grate and set it aside. Inside the burner area, surrounding the brass burners, is a stainless steel ring that will securely hold your wok in place while you cook with it.

The stainless steel ring also functions as a baffle for the burners and **must always be in place during operation.**

Cleaning and Maintenance

Removing and Replacing Burners

The burner has three pieces plus a wok ring. If you remove the burner for cleaning, make sure to clean each piece and replace them in proper order.

Removal

1. Disconnect or shut off the gas line connected to the Power Burner. Wait until the burners are cool.
2. Remove the grate and the wok ring.
3. Lift out the burner by raising the stud from the locking hole and pulling the burner out carefully to release it from the ignition and gas supply valves.
4. Set the burner in a safe and dry place.

Replacement

1. Set the burner body in place, making sure the stud in properly seated and the burner body is flat and level.

2. Set the burner ring on the burner body, making sure the pin on the burner ring is seated in the notch on the burner body.

3. Set the burner cap on the burner body, making sure the pin on the burner cap is seated in the notch on the burner ring.

4. Set the wok ring around the burner. Set the two pins at the back of the ring in place and the square hook in front on the bar.

Stainless Steel Care and Cleaning

All exposed stainless steel surfaces require special attention if you want to keep them looking clean and bright. Following these simple instructions will help avoid scratching or damaging the finish and keep your stainless steel attractive.

To ensure safe and proper maintenance, we recommend you follow these directions carefully.

Clean internal parts of the Power Burner regularly as determined by the amount of use and foods cooked. The entire Power Burner should be cleaned at least once a year.

In addition, keep the area around your Power Burner clear and free from combustible materials, gasoline, and other flammable vapors and liquids. Do not obstruct the flow of combustion and ventilation air.

These instructions describe the best way to care for your stainless steel.

Although stainless steel will discolor and accumulate grime with regular use, it can keep its original shine with periodic cleaning. We strongly recommend using a surface protectant to prevent smudging and surface rust from accumulating.

The easiest way to clean the stainless steel is immediately after cooking is completed. Doing so will extend the life of your Power Burner, prevent grease fires, and present a pleasant appearance while you cook.

Cleaning Products and Materials

Avoid using these common cleaning products and materials – they will damage the surface of your stainless steel.

- CLR
- Lime-Away
- Oven cleaner
- Cleansers such as Ajax or Comet
- Ammonia
- Bleach
- Chlorine
- Steel wool pads
- Wire brushes
- Scrapers
- Pumice

We recommend these products for cleaning your stainless steel:

- Mild dish detergent such as Dawn
- Formula 409
- Fantastik
- Sheila Shine (exterior ONLY)
- WD-40 (exterior ONLY)

We have had best success with Sheila Shine, but WD-40 works very well too. Sheila Shine is available in some hardware stores; WD-40 is widely available.

Some people have reported that using baking soda, lemon oil, olive oil, vinegar, or club soda can be effective for cleaning light soil on all stainless steel surfaces.

Do not use steel wool or wire brushes to scrub stainless steel. For light soil, use a damp sponge or cloth. For heavier stains, use a Scotch-Brite scrubber or similar product.

Caution

Do not use WD-40 or Sheila Shine near food or on food preparation surfaces as it is a health hazard. This includes the interior of the Power Burner and the grate.

1. Clean

Thoroughly clean stains, food, and grime using a sponge or damp cloth with warm water and a mild dish soap. Use Fantastik or Formula 409 to remove heavier soil.

2. Rinse

Thoroughly rinse all surfaces and dry them completely with a clean towel. Do not allow stainless steel to air dry.

3. Polish

We strongly recommend that you apply a surface protectant to all exposed stainless steel surfaces.

Spray a small amount of WD-40 or Sheila Shine on a piece of paper towel and rub with the grain over the surface of the appliance. Using a clean terry cloth or paper towel, polish the appliance by rubbing with the grain until excess liquid is removed and the surface shines. It should not be oily to the touch, however some residue is acceptable.

Some people have reported that using lemon oil products such as Old English furniture polish is effective for polishing stainless steel and protecting the surface.

**Fire
Hazard**

NEVER spray WD-40 or Sheila Shine near an open flame! These products are extremely flammable while in their aerosol forms.

Rust Removal

It is a common misconception that stainless steel does not rust. It does not stain, corrode, or rust as easily as ordinary steel (it *stains less*), but it is not stain-proof. If not properly protected and maintained, it can corrode, pit, and discolor.

Important

Because salt will accelerate rust and corrosion, Power Burner owners who live near the beach need to be diligent in maintaining their stainless steel hardware. You need to clean and polish your stainless steel frequently, apply a protectant, and ensure water does not collect and puddle.

Periodically clean exterior stainless steel surfaces with WD-40 or Sheila Shine and wipe down with a dry cloth or paper towel until surface is free of rust. If there is significant rust or corrosion, use a Scotch-Brite scrubber.

Both of these products will act as a surface protectant and help resist smudges, stains, and rust.

Caution

Although nitric acid (also called aqua fortis) can be effective for rust removal, it is a highly corrosive chemical. Because of the potential for injury or damage to your stainless steel, we do not recommend using nitric acid.

Burners

Spiders and small insects occasionally inhabit or make nests in the burner tubes, obstructing the gas flow. Sometimes this results in a type of fire in and around the gas tubes called "flashback". To reduce the risk of flashback, this procedure should be followed at least once a month or when your Power Burner has not been used for an extended period of time.

IMPORTANT: Prior to starting this procedure, turn OFF all of the gas control knobs, shut off the fuel supply, and disconnect the fuel line.

The burners can be removed by removing the keeper pins and lifting them out. The keeper pins are located under the Power Burner toward the back. They are used to keep the burners in place during shipping and are not necessary to operate the Power Burner. Remove burners

from the Power Burner by carefully lifting each burner up and away from the gas valve orifice.

Use a wire brush to clean the outer surface of each burner to remove food residue and dirt. Clean any clogged ports with a stiff wire such as an opened paper clip.

Inspect each burner for damage (cracks and holes). If any damage is found, replace the burner and discontinue usage.

Upon reinstallation, inspect the gas valve orifices for cleanliness and condition and the location of the igniters. When you replace the burners, you do not need to replace the keeper pins.

Drip Pan

The full width drip pan will collect grease from the main burner area. The pan should be cleaned after every use to avoid the possibility of a grease fire. Be sure to allow the drip pan to cool prior to cleaning. You may clean the drip pan with a solution of warm soapy water. Make sure to rinse thoroughly to avoid staining.

Steam Cleaning Your Power Burner

Steam cleaning your Power Burner is very effective and will not void your warranty. Portable hand-held steam cleaners are inexpensive and do not require chemicals. You can steam clean all parts of your Cal Flame Power Burner, including the burners. When you are finished, make sure you wipe all surfaces down.

If you spray the burners, ignite them and let them burn for about 10 minutes to prevent any water from accumulating inside them.

Covering Your Power Burner

When not in use and after cooling, cover your Power Burner with our canvas cover. (See your local Cal Flame dealer for details.) The cover will help protect your Power Burner from detrimental effects of weather and environmental pollutants. Never put a cover on a hot appliance. Allow the Power Burner to cool before covering.

To order a replacement cover, contact Cal Flame customer service at 1-800-225-7727.

Appendix

Troubleshooting

Problem: Smell of gas is present

Solution: Check for loose connections in the gas line. Perform a leak test following the procedure on page 9.

Problem: Burner does not ignite

Solution: Use the following procedure with the figure below.

Check the position of the sparker tip. It should be pointing forward towards the front of the burner.

- Make sure there is a blue spark at the electrode tip to the burner.
- Make sure the igniter wire is connected firmly to the valve ignition device and the electrode.
- Make sure the valve orifice is free of any debris, dust or grease.
- Make sure the valve orifice is aligned inside the front hole of the burner.
- If there is no spark at all, replace the electrode or igniter wire.

Note: Turn off the gas at the source while troubleshooting.

Problem: Plugged orifice

Solution: Unplug the orifice as follows:

- Remove grate and grease tray.
- Remove the burner ring and the outer burner.
- Carefully lift the center burner up and away from the gas orifice.
- Remove the orifice from the control valve.
- Gently clear any obstruction with a fine wire.
- Reinstall the orifice, reinstall the burners over the orifices, and place the burner peg into position hole at the bottom ledge of the firebox.
- Replace cooking components and grease tray.

If an obstruction is suspected in the control valve, contact your local Cal Flame dealer for assistance.

Problem: Burner tube is misaligned over the orifice

Solution: Reposition the burner tube so that it is properly seated over the orifice.

Problem: Obstruction in the gas line

Solution: Remove the fuel line from Power Burner. (Do not smoke or perform any maintenance in the vicinity of an open flame.) Open the gas valve for one second to blow out any debris. Close off the gas valve and reconnect the fuel line securely.

Problem: Yellow Flame

Solution: Some yellow at the tips may be present due to impurities in the fuel. If the flame is golden or yellow in color, the reason could be seasoning salts, oil film, or other foreign matter on the burner.

You may also need to adjust the venturis. If you are using propane, they should be completely open. If you are using NG, they should be open 1/4 to 1/2 way. (See page 16 to see location of the venturis.)

Problem: Misalignment of Igniter on Burner

- Solution:**
- Check for proper position of the electrode tip, which should be pointing forward towards the front of the burner and free of grease to allow proper sparking.
 - The ignition wire should be connected firmly to the valve ignition device and electrode. Replace the ignition wire if it is frayed or cracked.
 - With the gas supply closed and all control knobs set to the off position, check each position igniter individually for the presence of a spark at the electrode. Push each knob in fully and rotate it about 1/4 turn to the left (counter-clockwise) until you hear a loud click. The trigger hitting the strike block should produce a blue spark at the electrode tip. Return control knob to the off position before checking the next igniter.
 - While the Power Burner is still hot, wait for a minimum of five minutes before commencing re-ignition. (This allows accumulated gas fumes to clear.) If all checks / corrections have been made and the Power Burner still fails to operate properly, contact your local Cal Flame dealer.

Problem: Flashback

- Solution:** When fire occurs in and around the burner tubes, immediately turn off gas at its source and turn the control knobs clockwise to the 'OFF' position. Wait until the Power Burner has cooled off and then clean the burner tubes and burners as described on page of this manual.

Converting from LP to NG

WARNING! You must have an authorized service technician perform this procedure. If these instructions are not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life. LMS will not be held responsible for an improperly converted gas appliance.

All Cal Flame gas appliances are manufactured to operate with standard liquid propane (LP) and can be converted to burn natural gas (NG). There are two steps required to convert from LP to NG.

You must perform both steps.

Step 1: Switching the regulator behind the Power Burner

Step 2: Changing the burner orifices

The kit contains two orifices to convert main burners. Your kit will have only the parts you need to convert your Power Burner.

Before you begin, make certain the LP gas source has been disconnected from the Power Burner.

Step 1: Switching the regulator

The regulator in the image below has been removed to illustrate this procedure.

1. Remove the LP gas line.
2. Remove the cap fitting from the end of the NG gas regulator.
3. Place the cap fitting over the LP gas inlet.
4. Insert a male flared fitting (**not provided**) in the NG gas regulator.

You will need:

- 13 mm open end wrench
- Male flared fitting (**not provided**)
- Pipe compound suitable for natural gas

NOTE: A flared fitting is NOT included.

If you are attaching a flex hose to the regulator, you will need a fitting. The fitting requires a male flare on the input end with a 1/2" MPT on the output end. The flared male input end needs to be the size of your flex tubing. You can also connect the regulator directly to your NG gas service, which will not require a flared fitting.

Step 2: Changing the burner orifices

1. Remove the grate, burner ring, and burner from the Power Burner.
2. Locate the gas orifices. They will be directly behind the gas valves.
3. Using a 6mm socket or nut driver, remove the orifice.

You will need:

- 6 mm socket or nut driver
- One 1.93 mm orifice (for inner burner)
- One 2.44 mm orifice (for outer burner)
- Pipe compound suitable for natural gas

Orifice for
inner burner

Orifice for outer
burner ring

4. Apply a small amount of pipe compound to the orifice threads.
5. Screw in the orifice until it is finger tight.
6. Tighten the orifice with the 6mm wrench.
7. Repeat the above steps for the remaining burners.
8. Replace the burners and the grate.

Mark the rating plate

After conversion has been completed, mark the rating plate as NG with an indelible marker.

Orifice sizes

	Inner burner	Outer burner
NG	1.93 mm	2.44 mm
LP	1.18 mm	1.54 mm

LIMITED WARRANTY

LMS warrants the Power Burner and associated hardware from defects in material and workmanship for a period of one year from the original date of purchase. This includes deterioration and corrosion of burners, mountings, and lid and body.

Extent of Warranty

This limited warranty is only valid on Cal Flame models delivered in the United States or Canada and extends through the selling dealer to the original purchaser at the original site of installation. This warranty becomes valid at time of delivery and ends either by specified time-frame listed above or upon owner transfer or relocation.

Warranty Performance

In the event of a malfunction or defect covered under the terms of this warranty, contact either the selling dealer or a local contractor or service technician. Depending on your needs, this may be a contractor qualified to repair stone and tile or a service technician licensed to repair gas or electrical appliances.

In the event the consumer is unable to obtain satisfactory customer service from the selling dealer or service technician, written notification must be given to the LMS Customer Relations Department within 30 days of the reported failure.

There will be no charge for parts on a covered item. Cost of labor is the responsibility of the owner. Shipping and handling charges will apply to all warranted replacement parts. The service technician may assess a reasonable travel or mileage charge per service call. If LMS determines that repair of a covered item is not feasible, LMS reserves the right to replace the defective merchandise with merchandise equal in value to the original purchase price. Warranty repair and / or replacement are the sole discretion of LMS and this warranty does not cover costs therein, including but not limited to: freight, removal, re-installation, etc.

This warrant is non-transferable and may not be extended beyond the above mentioned time frames under any circumstances, by any of LMS's representatives.

Warranty Limitations

The stainless steel grill hood, stainless steel grate, and the optional fabric grill cover are not covered by this warranty.

This warranty is void if the barbecue grill has been subject to negligence, alteration, misuse, repairs, dings, dents, scratches, or incorrect and / or prohibited applications, as specified in the owner's manual. Gas lines must be installed by a licensed plumber only or local gas company agent. Incorrect electrical installation by unlicensed electricians, service by non-LMS authorized representatives, acts of God and other cases beyond the control of LMS are not covered by this warranty. Please refer to the owner's manual for examples of exclusions and common acts invalidating this warranty.

This limited warranty applies only to barbecue grills and associated hardware used for personal, family, and outdoor household purposes. This warranty does not apply to labor charges on grills, replacement parts and hardware. This limitation is retroactive and applies to all grills and hardware manufactured from 2000 and hereafter.

Examples of common acts invalidating this warranty include but are not limited to:

- Scratches caused by normal use.
- Damage caused by extreme weather conditions (hot, cold, etc.)
- Damage caused by salty and humid conditions (especially in beach or seaside communities)
- Damage caused by dirt, sand, and/or water damage.
- Damage caused by continued operation of the barbecue with either known or unknown problems.
- Damage caused by direct sunlight.
- Damage caused as a result of failure to follow the operating instructions as defined in this owner's manual.

This limited warranty applies only to barbecues normally used for personal, family, or household purposes and specifically excludes rental or commercial applications.

Disclaimers

LMS shall not be liable for loss of use of the barbecue grills, related hardware or other incidental or consequential costs, expense or damages, which may include, but are not limited to, removal of permanent deck or other custom fixtures or the necessity for crane removal. Any implied warranty shall have duration equal of the applicable warranty stated above.

Legal Remedies

This limited warranty gives you specific legal rights. You may have other rights, which may vary from state to state.

Customer Service

For customer service, contact the authorized selling dealer immediately. If you need additional information or assistance, please contact the LMS Customer Relations Department at 1462 E. Ninth St., Pomona CA 91766 or call (800) 225-7727.

See your Cal Flame barbecue dealer for a copy of the applicable warranty, details and any questions you may have regarding the warranty coverage on your barbecue.

Locating the Product Serial Number

The serial number of your Cal Flame Power Burner is located on the side and is visible before you place it in the barbecue island cut-out. You will need this number to properly register your Power Burner and activate coverage. Write this information in the space provided below.

Model: BBQ11955P

Serial number: _____

Type of fuel (circle one): Liquid propane Natural gas

Date purchased: _____

Date installed: _____

Cal Flame dealer's phone number: _____

Cal Flame dealer's address: _____
